Specifics of their case

Barcode recognition and classification

For the Pierret group, a Belgian company specialized in the production of custom-made doors and windows, billing management must be optimized.

Problems and solutions

No less than 6 companies make up this family business. Therefore, invoicing management of these different entities requires the implementation of tools dedicated to dematerialization and automatic classification.

Invoice dematerialization

On all receipts of the invoices published by each entity (around 1,000 per month), a bar code is affixed to identify the company on each of them.

The first few digits of the barcode are linked to the different entities and allow therefore immediate identification of the concerned company. The last digits of the barcode correspond to the invoice number. Invoices are then scanned via a Canon GR1100 multifunction printer supported by IRIS Powerscan software and its powerful OCR capabilities.

Separation, renaming, classification

After scanning a batch of invoices, IRIS Powerscan separates them using barcode recognition and automatically renames them. Finally, IRIS Powerscan compresses the file size and integrates them into the parent company's management software in PDF Images format.

Thanks to this management, the Pierret company is able to fully and easily manage its invoicing flow by reducing time, costs and encoding errors.

The IRIS Powerscan solution

IRIS Powerscan enables document capture, sorting, indexing and exporting as fully searchable files, eliminating errors and reducing costs, while increasing productivity. It offers a single solution for capturing data from various channels (paper, files or email attachments).

IRIS Powerscan offers a reliable document capture solution that not only extracts critical business information, but takes care of integrating it into business applications. The documents are thus converted to the appropriate format and exported automatically with the corresponding indexed data to the destination of his choice.
