

Find out more about VPauto:

VPauto is a historic auction house that has changed with the times and now bases its performance on industrialised processes. It is led by auctioneer François Laurent Guignard. He is an ideas man and a natural leader who has spent his whole career trying to popularise the auction concept amongst the general public. The company, founded in 1982, has three physical points of sale (Lorient, Nantes, and Rouen) and various electronic sale platforms. In 2018, VPauto sold almost 55,000 vehicles and achieved 85% of its turnover on line.

Framework of the requirements

Saving time and human resources

Dematerialisation must be an easy tool for VPauto to set up and use in order to free its employees from tedious tasks.

This should be a real asset, saving time and improving efficiency.

Providing a custom solution for VPauto's needs

VPauto wanted to industrialise the capture, sorting, indexing, and export of its data. To optimise its document management, the company was looking for a capture solution that would allow it to extract data that is useful for customer relations. Every day, VPauto received a PDF file containing all the logbooks and invoices of its vehicles that were sold at auction. This document was then split manually by a company employee so that each deed of sale would be renamed individually and then sent to its buyer.

Problem and solution

VPauto was looking for a partner with a software package capable of satisfying its needs. Because the company positioned itself as a service provider with expertise and experience recognised by its vendor clients. It needed a high-added-value service provider capable of supporting it, ensuring that its values would endure, and providing a positive solution in terms of saving time and money.

IRIS Powerscan™ Solution

IRIS Powerscan™ from IRIS was the solution that caught VPauto's attention. "Thanks to the features of IRIS Powerscan™, I was able to save an hour of working time, which I later reallocated to tasks that created far more value." explains Aidai Arsygulova, sales assistant at VPauto. The solution was in fact designed to address a need that every company experiences: to simplify the business and employee productivity in order to save valuable time! Thanks to this document management software that scans, imports, classifies, indexes, and exports for its user, savings can be made in many ways! With IRIS Powerscan™ 10, you can count on a document capture solution that not only extracts the data you need, but also exports it to the business applications of your choice. To satisfy our customers' needs, IRIS Powerscan™ 10 is available in more than one version.
